

SR 99 Tunnel Project

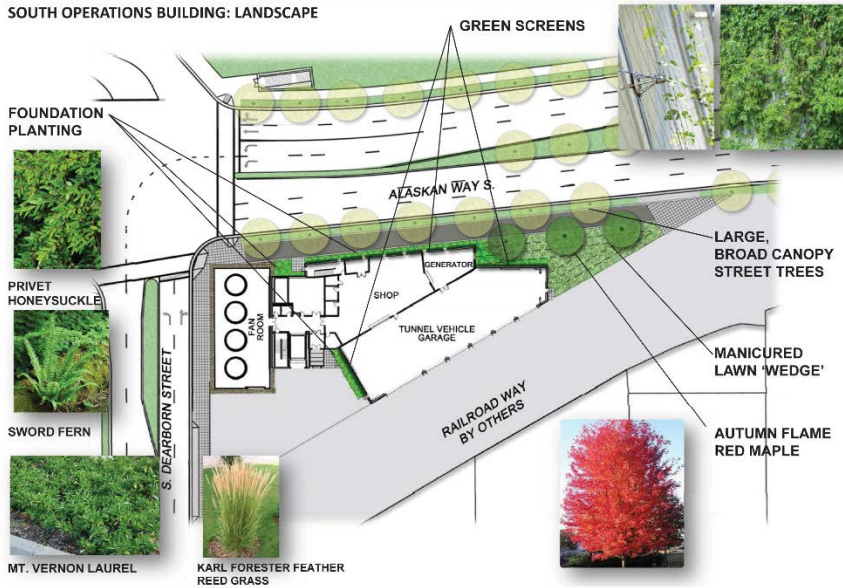

Seattle, Washington

SOUTH OPERATIONS BUILDING: HARDSCAPE

The Alaskan Way Viaduct, an elevated section of State Route 99 in Seattle, was built in the 1950s. Because of the viaduct's age and vulnerability to earthquakes, WSDOT, the City of Seattle, King County, and the Port of Seattle are constructing a two-mile-long tunnel beneath downtown Seattle, new highway approaches to connect at the south and north entrance to the tunnel, a new surface street along the waterfront, and a new overpass to access the port terminals.

SOUTH OPERATIONS BUILDING: LANDSCAPE

As part of the tunnel project design team, Osborn Pacific Group was retained to assist with the landscape and irrigation at the operation buildings located at the north and south portals to the tunnel.
