

SOUTH HILL MALL TRANSIT CENTER

Puyallup, Washington

Project:

South Hill Mall Transit Center

Client:

Pierce Transit

Location:

Puyallup, Washington

Services:

Landscape planting design, irrigation design, construction documents, specifications, and cost estimate.

The Pierce Transit transit center is designed with ten bus loading bays with shelters, pedestrian walkways, a utility building, and landscaped areas. The landscape design provides a contemporary visual image to blend the “people” spaces and the contemporary architectural style of the shelters. The landscaping also provides buffers for the surrounding vehicular traffic and provides a sense of scale and comfort to the pedestrian environment. This project was designed and was constructed as a design-build project.
